

# Exact Macola 10: Core ERP

Exact Macola 10 builds upon its core ERP and introduces new functionality to solve today's business problems for manufacturers and distributors

Take advantage of unprecedented extensibility that enables you to go outside of the normal boundaries of an ERP system.

New functionality in Exact Macola 10 enables automated processes that can commonly replace manual data entry – saving both time and money, while increasing accuracy. This new functionality enables you to easily complete transactions with quotes, orders, inventory, master data maintenance and more without re-entering data in multiple screens.

For example, a distributor may want to automatically perform an inventory check before an internet order is confirmed. With Exact Macola 10, you can complete that step automatically. Then, once that order is confirmed to the buyer, an order is automatically entered into the Exact Macola 10 system. This new process eliminates the need for manual data entry which has historically added extra time and effort and the potential for error.

## **Award-Winning Accounting with Real-Time Closing**

**Accounts Payable:** Utilize flexible vendor invoice tracking, streamlined recurring payments, easy check payment and reconciliation and Electronic Funds Transfer (EFT).

**Accounts Receivable:** Manage your customers' activity and credit to ensure high customer service levels and maximize cash flow.

**Assets & Depreciation:** Track and register your organization's fixed assets, and record and depreciate your company's assets from acquisition to disposition.

**Bank Book:** Reconcile bank statements online using up-to-the-minute, real-time values for cash accounts.

**Credit Card Processing:** Pre-authorize credit card transactions or authorize at order entry, with support for single or multi-users.

**Currency Manager:** Get the exchange rate information you need to keep on top of your international operations and do business in multiple currencies.

**General Ledger:** Make smart economic choices much easier with an easy-to-analyze format that extends your financial automation to every sub-sector of your organization.

## **Manufacturing & Distribution Functionality:**

**Bill of Material:** Establish the link between a single inventory item and the components that comprise the finished good.

**Manufacturing Cost Accounting:** Track actual costs and compare to planned costs, yielding valuable variance analysis data.

### Does your business face these challenges?

- Not enough automation and control over materials tracking and cost processes
- Lack of integration between accounting, inventory or other corporate systems and the shop floor
- No way of tracking product serialization for warranty control
- Inability to implement job costing

### Your solution: Exact Macola 10

- An inclusive ERP solution that provides integrated shop floor control, manufacturing cost accounting, inventory and project management
- An all-in-one solution designed to transform your business into a high-yield, efficient and integrated operation

**= exact**

And it all comes together.

**Master Scheduling:** Manage long-term production plans, including your company's sales forecast, material availability and plant capacity. Closely manage key indicators which drive the material and production plan of your remaining items.

**Standard Product Routing:** Standardize manufacturing routings – the information that describes the path a product follows on the shop floor as it flows through the production process.

**Advanced Distribution:** Utilize six specific functions: Landed Cost, Hard Allocation, Multi-Bin, Confirm Pick, Confirm Ship and Return Material Authorization.

**Order Entry:** Close the loop between customer service, the warehouse and accounting with features that support the billing, invoicing, picking and shipping processes, such as acceptance of orders and quotes, validation of credit and calculation of pricing.

**Inventory Management:** Manage the core of your distribution network through a comprehensive, integrated toolset that controls and tracks inventory items and information, enabling you to maximize inventory investment while providing the flexibility to support unique inventory requirements.

**Purchase Order and Receiving:** Automate the processes associated with procurement by utilizing this efficient, timesaving feature.

**Material Requirements Planning:** Streamline your manufacturing/warehouse operation and ordering – ideal for the single-site manufacturing and multiple warehouse operation.

**Shop Floor Control:** Manage the activities and flow of materials inside your plant by planning and tracking your workers, materials, tools, machines and time utilized in production, and make these activities visible throughout the organization.

**Standard Costing:** Maintain standard, current and projected costs for both accounting and manufacturing operations to help you manage the planning and budgeting of your entire operation.

**Production Order Processing:** Define numerous cost types to represent value added costs applied during production. Due dates can be tied to a manufacturing shop calendar, which manages days open for production.
