

EXPERIENCE THE CONVENIENCE OF THE PRIVATE CLOUD

Less hassle, more value.

In the private cloud your Exact solutions operate in your own trusted environment. With optimal flexibility, maximum performance and zero hassle. Because the experts manage, update, support and protect your software.

Advantages of the private cloud:

1. Transparent costs
2. Additional flexibility
3. Total convenience
4. Comprehensive security
5. Reliability
6. Maximum performance
7. Predictability
8. Expertise that supports your growth

What is the private cloud?

Exact's private cloud combines the flexibility of the cloud with the security and performance that you expect from our locally installed software. The software operates on a secure server in our data centre and offers you online access to your trusted Exact environment, for a fixed monthly fee, anytime and anywhere. Exact manages, updates, supports and protects your software. In short, no more internal IT challenges.

What is the difference between public and private cloud?

In addition to Exact Online, the public cloud solution of Exact, you can now use Exact Globe and Exact Synergy in the private cloud. Within the public cloud you share the infrastructure, the database and applications with other users. In the private cloud you can adjust the environment to your personal preferences. That means you can keep working in the same way that you are used to, including Exact add-ons and custom solutions. The private cloud is set up to offer the same security and performance that you have become accustomed to with our locally installed software.

Why place your software in the private cloud?

Transparent costs

No more IT investments for the transfer, maintenance and support of your software. You pay a fixed monthly fee for the use of the private cloud and support.

Additional flexibility

You're able to easily respond to changes in your company by arranging access for more or fewer users. In the private cloud you only use what you actually need.

Total convenience

You always have access to your information and applications. From your laptop, tablet and smartphone. Anywhere in the world. No more local software, no users installing updates. All your people will always have the latest version.

Comprehensive security

A comprehensively protected IT environment is obviously crucial. Your digital information is secure in a completely certified premium quality data centre. We adhere to strict security protocols to ensure that your data is optimally protected. Back-ups are created multiple times per day.

**Reliability**

Our data centre is set up according to the latest standards and is managed by infrastructure experts. This ensures the quality and continuity required for trouble-free use of your software.

Maximum performance

The hardware in our data centres stands for the most up-to-date technology and supports a high quality user experience. In many cases the connection may be faster than you currently experience with your current server location.

Predictability

You pay a fixed fee each month for the private cloud. This makes the costs transparent and predictable in comparison to managing your own server with its maintenance, licence and other service fees.

Expertise that supports your growth

Innovation in IT happens so quickly that it can be hard for non-specialists to keep up. By handing over your IT to the experts, you'll continually benefit from the latest innovations. This will allow you to get the best out of your Exact software and focus all your energy on delivering value to your clients.

I am already an Exact client. How do I transfer to the private cloud?

As an existing Exact client you currently manage our solutions yourself on a server or with a hosting provider. In both cases, it is possible to transfer these to the private cloud. In the private cloud we can manage all Exact applications and those of our permanent software partners. Your transfer proceeds quickly, simply and without any hassle.

As soon as you indicate that you wish to transfer to the private cloud, Exact or your business partner will contact you to discuss a time schedule. The migration takes place at a time selected by you. The down-time generally does not exceed an hour.

You will subsequently receive a login and password, together with a manual explaining everything you need to know. Aside from the login, nothing will change for you as the user. You can simply keep working as normal.

Your current maintenance contract stays the same. You then pay an additional monthly fee for using the private cloud.
